Wireless sun and wind meter

Table of contents

De installatie

Linking the sun and wind meter to the engine

Press the P2 key of the existing transmitter or channel once. The motor goes up and down. Press the P2 key of the existing transmitter or channel once more. The motor goes up and down. Then press 1x on the P2 key of the sun and wind meter. The motor goes up and down 2x. The sun and wind meter is now linked to the motor. Note! This is only possible if the end positions are set.

Checking the direction of rotation

Press UP once on the sun and wind meter. The sunshade should now close. Is the direction of rotation incorrect? Then change the direction of rotation according to the manual of the respective motor.

Setting values

Press any key to activate the display if it is switched off.

Press the M key for 3 sec, until the sun value in the display flashes.

Increase the value with UP to the desired sun intensity. (With A decrease the value)

Briefly press the M key once.
The sun value is now confirmed and
the wind value starts flashing.

Increase the value with UP
to the desired wind intensity.
(Use A to decrease the value)

The intensity can be set as you wish. Below is a
guideline.

* If the sun and wind meter measures the set sun intensity for 5 minutes, the product goes down. If the sun
intensity is below the set value for more than 15 minutes, the product goes back up.
* If the sun and wind meter measures the set wind intensity, the product goes up within 15 sec.
