

Space-saving Signal Conditioners M3-UNIT Series

SIGNAL TRANSMITTER
(field- and PC-configurable)

MODEL **M3LV**

MODEL & SUFFIX CODE SELECTION

M3LV-R4/□

MODEL _____

INPUT SELECTION

- ◆DC Current: Usable range 0 – 20mA; min. span 2mA
- ◆DC mV & V: Usable range ±1000mV; min. span 100mV
Usable range ±10V; min. span 1V

OUTPUT SELECTION

- ◆DC Current: Usable range 0 – 20mA; min. span 1mA
- ◆DC Voltage: Usable range ±2.5V; min. span 250mV
Usable range ±10V; min. span 1V

POWER INPUT _____

R4: 10 – 32V DC

CONFIGURATION OPTIONS _____

- A : PC and field configurable
- B : Field configurable

ORDERING INFORMATION

Specify code number (e.g. M3LV-R4/A). Orders will be shipped at default factory settings (4 – 20mA input/4 – 20mA output).

RELATED PRODUCTS

- PC configurator software (model: M3CON)
Downloadable at M-System's web site:
<http://www.m-system.co.jp>
- PC configurator cable (model: MCN-CON)

GENERAL SPECIFICATIONS

- Connection:** Removable terminal block
- Housing material:** Flame-resistant resin (grey)
- Isolation:** Input to output to power
- Overrange output:** Approx. -15 – +115%
(Negative current output is not available even within this range.)
- Fine zero and span adjustments:** ±15% via the front control buttons
- Configuration**
 - ‘One-Step Cal’ calibration: With I/O type and the full-scale range configured via the internal DIP switches, precise 0% and 100% ranges are calibrated via the front control buttons with a help of LED.
 - PC configurator (model: M3CON): Via Windows PC connected to the front jack.
Programmable features include:
 - I/O type and range
 - Zero and span adjustments
 - AD overrange action

Functions & Features

- Accepts a DC mV, V or mA input and provides an isolated DC signal
- Easy ‘One-Step Cal’ calibration using the front three control buttons without needing a PC; PC software is also usable.
- Both input and output type and range are configurable

Typical Applications

- Signal conversion between control room and field instrumentation with isolation
- Ideal for use as a fast solution, multifunctional spare part

Status indicator LED: Tri-color (green/amber/red) LED; Flashing patterns indicate operation status of the transmitter.

INPUT

- DC CURRENT: 49.9Ω resistor incorporated (0.25W)
Maximum range: 0 – 20mA DC
Minimum span: 2mA
Offset: Lower range can be any specific value within the input range provided that the minimum span is maintained.
- DC mV & VOLTAGE
Narrow Spans (mV)
Maximum range: -1000mV – +1000mV DC
Minimum span: 100mV
Wide Spans (V)
Maximum range: -10 – +10V DC
Minimum span: 1V
Offset: Lower range can be any specific value within the input range provided that the minimum span is maintained.
Input resistance: 1MΩ minimum

OUTPUT

DC CURRENT
Maximum range: 0 – 20mA DC
Minimum span: 1mA
Conformance range: 0 – 24mA DC
Offset: Lower range can be any specific value within the output range provided that the minimum span is maintained.
Load resistance: Output drive 12V maximum; e.g. 600Ω [12V/20mA] with 4 – 20mA

DC VOLTAGE
Narrow Spans (mV)
Maximum range: -2.5 – +2.5V DC
Minimum span: 250mV
Conformance range: -3 – +3V DC
Wide Spans (V)
Maximum range: -10 – +10V DC
Minimum span: 1V
Conformance range: -11.5 – +11.5V DC
Offset: Lower range can be any specific value within the output range provided that the minimum span is maintained.
Load resistance: Output drive 1mA maximum e.g. 5000Ω [5V/1mA] with 1 – 5V

INSTALLATION

Power input: Operational voltage range 9 – 36V DC; approx. 3W; ripple 10% p-p max.
Operating temperature: -25 to +65°C (-13 to +149°F)
Operating humidity: 0 to 95% RH (non-condensing)
Mounting: DIN rail
Dimensions: W18×H106×D110.5 mm (0.71"×4.17"×4.35")
Weight: 100 g (0.22 lbs)

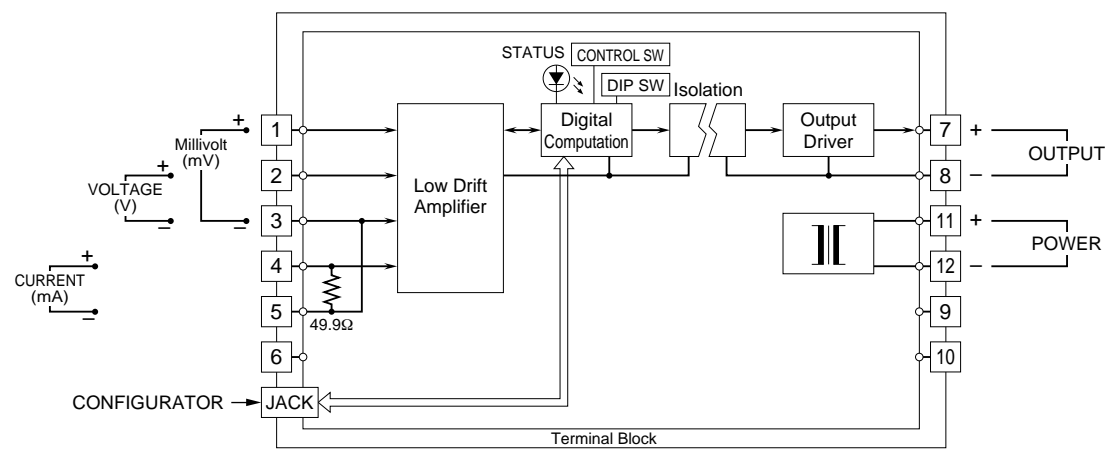

PERFORMANCE

Accuracy: Input Accuracy + Output Accuracy
Input accuracy*: (% of input range)
 -1000m – +1000mV : ≤ ±0.01 (%)
 -10 – +10V : ≤ ±0.01
 0 – 20mA : ≤ ±0.02**
Output accuracy*: ≤ ±0.04% of output range
 *Inversely proportional to the span.
 **Except the accuracy of input resistor.
 [Example] Input Range 1 – 5V, Output Range 1 – 5V
 Max. Input Range (20V) / Span (4V) × 0.01% +
 Max. Output Range (20V) / Span (4V) × 0.04% = 0.25%
Temp. coefficient: ±0.015%/°C (±0.008%/°F) of max. range
Response time: ≤0.5 sec. (0 – 90%)
Line voltage effect: ±0.1% over voltage range
Insulation resistance: ≥100MΩ with 500V DC
Dielectric strength: 1500V AC @1 minute (input to output or power to ground) 500V @1 minute (output to power)

STANDARDS & APPROVALS

CE conformity: EMC Directive (89/336/EEC)
 EMI EN61000-6-4
 EMS EN61000-6-2

EXTERNAL DIMENSIONS & TERMINAL ASSIGNMENTS mm (inch)

•When mounting, no extra space is needed between units.

ONE-STEP-CAL CALIBRATION

CONFIGURATION MODES & DIP SW

When you program the transmitter module, two configuration modes are available: Field Configuration using DIP SW / control buttons, and PC Software. (Option B type is for the field configuration only.)

The internal DIP switches are used to configure input and output type. Once the module is configured, precise ranges are set up with the front control buttons using a simulator connected to the input terminals and a multimeter connected to the output terminals as a reference.

INPUT & OUTPUT RANGING

For example, suppose that the DIP switches are configured for the DC V ($\pm 10V$ full-range). Turn the power supply to the transmitter on and press MODE button to enter to the Input Calibration Mode. Apply the desired minimum (e.g. 1V) and maximum (e.g. 5V) input levels and push the DOWN (zero) and UP (span) respectively to set the input range to 1 – 5V.

Then the output range can be calibrated in a similar manner after moving to the Output Calibration Mode by pressing MODE button again. Increase or decrease the simulated input until the output meter shows the desired levels and push the DOWN (zero) and UP (span) respectively for the minimum (e.g. 4mA) and maximum (e.g. 20mA) levels.

The front LEDs' colors and flashing patterns help you to easily identify the transmitter's status and confirm the setup actions in each step of Calibration Modes. See detailed explanation in "Calibration Flow Chart."

The calibrated input and output ranges are stored in the internal memory. The module reads the DIP-switch-calibrated configuration only once after the power supply is turned on. Set the switches with the power supply removed.

FINE ZERO & SPAN ADJUSTMENTS

After the transmitter is installed and operational, fine zero and span tuning can be also performed using the front control buttons. Both zero and span are adjustable within $\pm 15\%$.

PC SOFTWARE CONFIGURATION

When you need to apply the same setting to multiple transmitters, downloading one setting from the PC is convenient. The PC Configurator Software (model: M3CON) is available separately.

Turn the transmitter to PC Configuration Mode (See Table 1) and all programmable features can be set up on a PC regardless of other DIP SW setting except that the output type must be selected with the DIP SW1-1 through SW1-4 (See Table 4).

For detailed information on the PC configuration, refer to the M3CON instruction manual.
