Water Detection Sensor

Detects Water reliably

CE Marked
Conforming to EMC Directive

Strong Penetration Power

As the penetration power is strong, its beam can pass through not only translucent containers (PFA tanks, etc.) but also opaque containers of shampoo bottles, etc., and can reliably detect the liquid inside.

Comparison of Penetration Ranges for Empty Containers

The above graph is to be used as a guideline only. Actual penetration range will vary depending on the material composition, thickness and color of the container. It is recommended that penetration range be tested and confirmed prior to application. Please contact our nearest office for more

Not Affected by Drops, Bubbles or Froth

It is possible to set its sensitivity adjuster so that water drops, bubbles in the water, or froth on the water surface are not detected.

Bubbles

Froth

Adjacent Sensor Mounting Possible

Several sensors can be mounted adjacently by fitting optional slit masks. Further, they can detect the liquid level accurately.

Plug-in Connector Type Is Available

Plug-in connector type which enables connection/disconnection of the cable by one-touch is available. Anyone can easily replace the sensor in a minute.

IP67 protection

The sensor can be hosed down because of its IP67 construction and the non-corrosive stainless steel sensor mounting bracket.

Note: However, take care that if it is exposed to water splashes during operation, it will detect the splashed water itself.

APPLICATIONS

Detecting level of aqueous solution in resin tank

It can reliably detect a liquid even in an opaque container.

Detecting the boundary between water and oil

Since it does not detect oil, it can reliably detect the boundary between water and oil.

Detecting presence of liquid in colored bottle

Aqueous liquids in translucent colored bottles can be reliably detected.

ORDER GUIDE

Type	Appearance	Sensing range (Note 1)	Model No.	Output
NPN output		5m (without container or pipe)	EZ-11	NPN open-collector transistor
PNP output			EZ-11-PN	PNP open-collector transistor

NOTE: Mounting bracket is not supplied with the sensor. Please select from the range of optional sensor mounting brackets (five types).

Note 1: The sensing range shortens depending on the thickness, material, color, etc., of the container or pipe.

Plug-in connector type

Plug-in connector type is available (Standard is cable type).
When ordering this type, add suffix '-J' to the model No.
(e.g.) Plug-in connector type of **EZ-11-PN** is '**EZ-11-PN-J**'.

SPECIFICATIONS

Item	Type	NPN output	PNP output
	Model No.	EZ-11	EZ-11-PN
Sensing range		5m (without container or pipe) (Note)	
Sensing object		φ 12mm or more liquid which contains water, or opaque object	
Supply voltage		12 to 24V DC ± 10% Ripple P-P 10% or less	
Current consumption		Emitter: 25mA or less, Receiver: 25mA or less	
Output		NPN open-collector transistor • Maximum sink current: 100mA • Applied voltage: 30V DC or less (between output and 0V) • Residual voltage: 1.5V or less (at 100mA sink current) 0.4V or less (at 16mA sink current)	PNP open-collector transistor • Maximum source current: 100mA • Applied voltage: 30V DC or less (between output and + V) • Residual voltage: 1.5V or less (at 100mA source current) 0.4V or less (at 16mA source current)
	Utilization category	DC-12 or DC-13	
	Output operation	Switchable either Light-ON or Dark-ON	
	Short-circuit protection	Incorporated	
Response time		12ms or less	
Operation indicator		Orange LED (lights up when the output is ON), located on the receiver	
Stability indicator		Green LED (lights up under stable light received condition or stable dark condition), located on the receiver	
Power indicator		Orange LED (lights up when the power is ON), located on the emitter	
Sensitivity adjuster		Continuously variable adjuster	
Environmental resistance	Pollution degree	3 (Industrial environment)	
	Protection	IP67 (IEC)	
	Ambient temperature	0 to + 55°C (No dew condensation or icing allowed), Storage: - 30 to + 70°C	
	Ambient humidity	35 to 85% RH, Storage: 35 to 85% RH	
	Ambient illuminance	Sunlight: 10,000 lx at the light-receiving face, Incandescent light: 3,000 lx at the light-receiving face	
	EMC	Emission: EN50081-2, Immunity: EN50082-2	
	Voltage withstandability	1,000V AC for one min. between all supply terminals connected together and enclosure	
	Insulation resistance	20MΩ, or more, with 250V DC megger between all supply terminals connected together and enclosure	
	Vibration resistance	10 to 500Hz frequency, 3mm amplitude (20G max.) in X, Y and Z directions for two hours each	
	Shock resistance	500m/s ² acceleration (50G approx.) in X, Y and Z directions for three times each	
Emitting element		Infrared LED (modulated)	
Material		Polycarbonate	
Cable		0.2mm ² 3-core (emitter: 2-core) oil resistant cabtyre cable, 2m long	
Cable extension		Extension up to total 100m is possible, for both emitter and receiver, with 0.3mm ² , or more, cable.	
Weight		Emitter: 45g approx., Receiver: 50g approx.	
Accessory		Adjusting screwdriver: 1 No.	

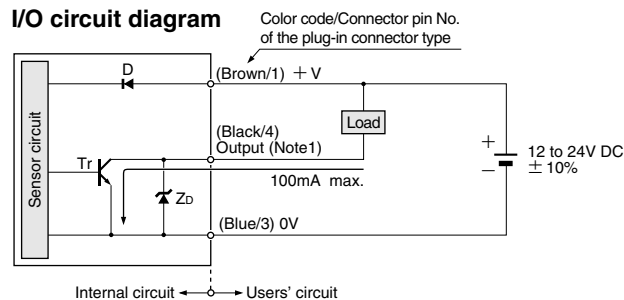

Note: The sensing range shortens depending on the thickness, material, color, etc., of the container or pipe.

PRECAUTIONS FOR PROPER USE

This product is not a safety sensor. Its use is not intended or designed to protect life and prevent body injury or property damage from dangerous parts of machinery. It is a normal object detection sensor.

Mounting

- The tightening torque should be 0.5N·m or less.

Operation mode switch

Operation mode switch	Operation
	Light-ON mode is obtained when the switch is turned fully counterclockwise (L side).
	Dark-ON mode is obtained when the switch is turned fully clockwise (D side).

Others

- Do not use during the initial transient time (100ms) after the power supply is switched on.
- When connecting the mating cable to the plug-in connector type sensor, the tightening torque should be 0.4N·m or less.

Sensitivity adjustment

Step	Sensitivity adjuster	Operation
①		Turn the sensitivity adjuster fully counterclockwise to the minimum sensitivity position, MIN.
②		With the liquid which contains water or the opaque object absent (light received condition), turn the sensitivity adjuster slowly clockwise and confirm the point (A) where the sensor enters the 'Light' state operation.
③		With the liquid which contains water or the opaque object present (light interrupted condition), turn the sensitivity adjuster further clockwise until the sensor enters the 'Light' state operation and then bring it back to confirm point (B) where the sensor just returns to the 'Dark' state operation. (If the sensor does not enter the 'Light' state operation even when the sensitivity adjuster is turned fully clockwise, this extreme position is point (B).)
④		The position at the middle of points (A) and (B) is the optimum sensing position.

Notes: 1) Use the accessory adjusting screwdriver to slowly turn the adjuster. Turning with excessive force will cause damage to the adjuster.
2) Special emitting and receiving devices are used in this product. As they are easily affected by changes in ambient temperature and humidity, do the sensitivity adjustment under the actual operating conditions.
