## Novagran quality blends

Novagran is a unique line of granulated blend fertilizers from Triferto. In one application all necessary nutrients such as NPK, secondary and trace elements. You can formulate your own fertilizer based on your specific requirements.

- ✓ Size made to perfection
- ✓ Responds to customers' needs
- ✓ All-in-one fertilizer
- ✓ Flexible
- ✓ Obtaining a perfect spreading pattern
- ✓ Maximum fertilizer yield

## Novagran: Optimal fertilizer blend

Together with our customer we determine the correct fertilizer blend. Different soil types, crops or grower requirements do not lead to a standard fertilizer. It needs a tailor-made solution based on:

**Logistics and storage**

**Soil composition**

**Labour and machinery**

**Crop requirements**

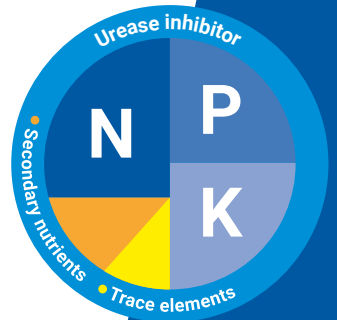

**Climate**

## Result: Tailor-made solution

Your final Novagran blend will consist of all nutrition needed for your specific needs. With Nitrogen (N), phosphate (P) and potassium (K) as basis.

- Secondary nutrients such as calcium (Ca), magnesium (Mg) or sulphur (S).
- Trace elements such as bore (B), copper (Cu) or zinc (Zn).
- Urease inhibitors preventing the volatilization of ammonia.

## Quality

The use of a high-quality Novagran blend fertilizer guarantees good spreadability and uniform fertilization. Novagran blend fertilizer are always treated with an anti-cake coating and therefore “free-flowing”. For its raw material, Triferto selects for uniform physical properties, including the grain weight, grain shape and grain size. In addition, all grains contain 2-4 nutrients per grain. As a result, a Novagran blend fertilizer behaves like a compound fertilizer.

## Suitable for long-term storage

Good physical and chemical properties determine the shelf life for fertilizer. Many bulk blends are not suitable for long-term storage due to chemical interactions between granules, dust and moisture in the product. Novagran blends can easily be kept in packaged form for a few months, provided that the product is of course not exposed to moisture, UV radiation or high temperatures.

### Smart logistics

Our warehouses are situated close to Antwerp, Belgium and Rotterdam, the Netherlands. Transport costs are kept to a minimum. Our customers are assured of mineral fertilizers at the time they are required.
