

From soil to life

Solferto - watersoluble fertilizers

SOLFERTO is an hydrosoluble fertilizer with different NPK ratios. It fulfills the needs of the crops at each plant development stage. SOLFERTO can be used in fertigation systems or as foliar application due to its high solubility.

Tailor made formular

The Solferto range of products are fully water soluble fertilizers. They are free flowing and dissolve quickly in water without any residues. The range of products are suited to application through all fertigation systems – drip, low throw sprinklers, centre pivots and spray units. When this range of Solferto products do not complement the needs of your crop, we are flexible in create a tailor made formula.

Characteristics

Appearance : crystal powder

pH at 20°C : 3,5 - 5,5

Solubility : 400 - 700 g/l (distilled water at 20°C)

Packaging : bags 25 kg on pallets of 1,2 T.

Solferto - application - fertigation

Recommendations

Application is recommended from vegetation growth till harvesting.

- Fertirrigation systems : 1 to 3 g/l of irrigation water.
- Foliar treatments open field: 0,5 % solution, that is 1kg of SOLFERTO for 200 l of water per hectare
- Foliar treatments arboriculture: 0,5 solution, that 5 Kg/1000 l of water per hectare
- Repeat 2 to 3 times if needed.
